THE PAYOUT LAYER FOR THE GRID

Turning power into **profits.**

Every home battery, EV and solar array is **idle capital**. GridPay turns that stored power into same-day income – starting in Texas, built for the national grid.

“Nothing is EVER free!” — Texans are posting \$700 bills every single day.

V Vanda Crossley · Heritage Square

Neighbors DO NOT FALL FOR FREE NIGHTS OR WEEKENDS FOR ELECTRICITY. There are so many commercials/ads about free electricity days or nights than ever. They are not what they seem...

♥ 42 · 💬 71 comments

L Latisha Authur · Windstone Colony South

Hello I'm new to Texas... I got the electric bill for this month and let me just say I've never seen a bill \$390 for the month. I'm just wanting to know if there is any local charities... that help with utilities assistance.

💬 87 comments

N Nicole B. · Castle Rock

Please find a flat rate provider. August and September bills have been up to \$700–\$800 for us smh total highway robbery

Nextdoor · Jul '26

R Rita Obey · Fresno, TX

Start with this real electricity bill: \$354 total. Of that, \$150 — about 42% — went directly to CenterPoint just to carry the electricity across its wires.

♥ 3 · 💬 6

K Karl Chapman · Wallis, TX

I had a “free nights” plan for 3 years, on average billing. I fed my bills into CGPT and found that it really wasn't a deal. Changed plans and my bill has almost halved.

♥ 7 · 💬 7

P Peter Weinheber · Shadow Pointe

There are no Free nights. Or weekends. You still have to pay the TDU. CenterPoint is not a charity.

♥ 6 — and Janet: “Nothing is EVER free!”

Verbatim posts · Nextdoor, Houston metro · Jun–Jul 2026 · originals archived in the data room. One “why is my bill \$390?” post drew 87 replies of guesswork — nobody could answer with data. We can.

\$700–\$800

one household's summer bills

87 replies

of guesswork — nobody had the answer

~42%

of one real bill = delivery fees

You sell power back at 3¢. They sell it to your neighbor at 31¢.

THE HOMEOWNER'S DEAL

Texas rates climbed 10¢ → 16¢/kWh in two years. Solar buy-back plans credit as little as 3¢. Batteries cycle all day on zero-spread plans and never earn a cent.

THE CONFIGURATION CRISIS

~70% of the Texas home batteries we've audited are set up wrong – wrong tariff windows, zero-spread buy/sell, reserves that fight the plan. Nobody's minding the settings.

Same hardware exists for everyone. The difference is the **payout layer** – and it's not turned on.

3¢ → 31¢

a 10× spread homeowners never see

24% + 3.9%/yr

buried dealer fee + PPA escalator

NEM IS GONE – CREDITS THAT
AREN'T MONEY

Texas retired net metering. Export credits offset energy charges ONLY – never the ~42% delivery fees.

Whoop for your body. GridPay for your home's energy.

THE PARSER

Reads every battery, meter and utility plan; cross-checks payouts against monthly utility reads. Settlement-grade accuracy – competitors settle on estimates in 60–365 days.

PATENT PENDING

US App. 19/411,270 (prioritized examination requested): parallel detection across grid prices + home telemetry; tariff enrollment and battery reconfiguration execute as ONE atomic transaction – the switch only completes if the hardware change confirms.

SELF-DRIVING POWER

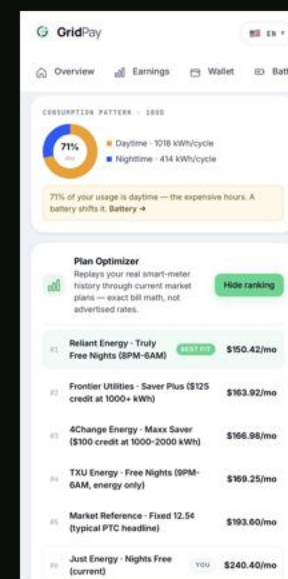

Full-loop automation: detect the better configuration → switch plan + reconfigure hardware atomically → verify → pay. No customer homework.

IP position: utility patent pending + provisional & non-provisional family · GRIDPAY® published for opposition July 14, 2026.

One engine, every surface – every data source feeds one rules engine; every recommendation (REP switch, solar-charge credit, load-shift push, device upsell) comes out of it with the same provenance.

5 feeds → 1 engine → every surface

same provenance behind every recommendation

The engine's output, live:

a member's real meter history replayed through market plans –

current: \$240.40/mo

best fit: \$150.42/mo

Exact bill math, not advertised rates. 71% daytime usage flagged – “a battery shifts it.”

BLENDED ARPU · PROJECTED

\$25/mo

per battery-connected home at scale

- Owners earn \$800–\$2,000/yr (projected; snowbird/second-home profiles \$2,600+) – net platform profit \$400–800/customer/yr
- Grows with SPAN panels, larger batteries, smart-home devices & added properties

1,000+ MW of Texas home batteries is a multi-billion-dollar settlement market.

BOTTOM-UP

200K+ Texas battery homes by 2028 × \$300/yr platform revenue = \$60M+ ARR in one state. Deregulated markets replicate the playbook (US, Japan via JETRO).

WHY NOW

AI data centers are projected to consume 8–12% of US electricity by 2028 – Texas is ground zero. Homes that can export aren't just saving money; they're keeping the lights on.

THE WEDGE

Every VPP needs settlement. We're hardware-agnostic and aggregator-friendly – the rails, not another walled garden.

A sequenced launch we can already see **end to end.**

Blended \$40–50

Gated on network size: 10 batteries under control today (~30 confirmed pipeline) → 100 kWh Voltus minimum → 1 MWh residential unlock.

OPT-IN GRID-EVENT ALERTS — THE SNOWBIRD ENGINE

Every event fires an opt-in alert: estimated payout, time window, one tap to participate — with manage-preferences built in (left: a real Grid Relief email).

Seasonal owners earn from 1,500 miles away — snowbirds become the easiest warm-list conversion. And every participating home pulls through partner hardware: SPAN panels, XFRA nodes, Enphase & SolarEdge fleets — adoption compounds across the network.

Everyone collects grid revenue. We're the first to **pay owners the same day.**

	GridPay	Tesla VPP	Base Power	Lunar	Daylight
Same-day payouts	✓	365-day	no user cut	monthly	batch
Residential + commercial	✓	resi only	resi only	resi only	—
Works across battery brands	✓	Tesla only	own hardware	—	—
